

This page contains my idea for extending Total Commander's functionality which (I hope) will be implemented someday.

It could be nice to have an alternative view for panels.

Now there are: Brief, full, Comments and Thumbnail view. There should be something like Windows Explorer view. I am thinking about possibility to use system *file manager* because I've seen a lot of tools which are using system windows for displaying their content.

Example 1.

GmailDrive utility. It could be easier to use it via explorer instead of playing with registry.

Example 2.

In my old company, we are using Livelink IMS. Every employee had installed tool which was giving the possibility of browsing through central server using modified explorer window. I know that some file managers have no problems with that. TC does. Using Windows explorer could help with that issue.
