Button bar items alignment

This page contains my idea for extending Total Commander's functionality which (I hope) will be implemented someday.

Looking on TC from extended packs point of view makes me thinking about one thing. What about adding one more parameter for button bars for specifying buttons' position?

Something like:

  RightAlignXX=Y

where:
 XX - button's number (similar to PathXXX)
 Y - Boolean value (0 for default)

When user chooses "1", needed button would be right aligned.

This kind of feature could be really helpful for panels correlated buttons. For now the only solution is making different BAR files for each screen resolution what is a real pain.

Please take a look [here](#) and you will understand.
