

*This page contains my idea for extending Total Commander's functionality which (I hope) will be implemented someday.*

---

Different sections in wincmd.ini for Lister Plugins might be something for making TC more comfortable.

I'll explain what I mean with it:

1st section is standard [Lister Plugins]

2nd section should be [Quick View Plugins]

I'm using IrfanView to watching images but it has a problems with fitting images to panel. Maybe using other plugin resolve problem, but on my machine IV is the fastest. Using SynUs for syntax highlight, but sometimes it could be more effective to use IView instead. ActivePDFview/PDFfilter instead of pdfview...

The main assumption is that lister on F3-key should be the fastest as it can be.

If lister loads plugins only when create own window and close that files on exit, it should be easy to implement.
