This page contains my idea for extending Total Commander's functionality which (I hope) will be implemented someday.

Current solution gives a little thrills when you've got to choose specific hard drive. For backup purposes it is nice to know, on which drive partition is placed. It is not the mother of live and death but can give less effort to gain that knowledge.

Proposed solution is to store values to be groupped in additional INI parameter:

  GroupPartitions=CD,EFG,XY

where the period indicates separation.

The other way is just to use SamePartitions parameter.
