

This page contains my idea for extending Total Commander's functionality which (I hope) will be implemented someday.

I've been thinking about possibility to have different thumbnails views in TC. Right now there is only one view of this type possible. It gives some discomfort if You want to change thumbs size, because whole database is rewritten.

My proposal is thumbnails views list with standalone options for each of them (e.g. thumbnails database file name). It could make work easier if soeme `cm_xxx` command would be attached to switching between this list entries.

P.S. 1. **roentgen** proposed on Total Commander board to use Ctrl + mouse wheel functionality, but I think that could give problems with database files.

P.S. 2. Maybe it is the next step for my dream-like filemanager ;) No picture viewers and cataloguing software needed any more to run.
