

By default **Comparer** shows only basic files properties (size, dates, attributes) but after adding WDX (content) plugins the amount of available data grows a lot.

Downloading plugins

You can find proper WDX plugins by going to:

- Russian TC's plugins website - totalcmd.net
- Unofficial Polish website - totalcmd.pl

For information about properly working plugins, please [take a look on table](#) at the bottom of this page.

Installation Downloading

Go to one one from mentioned plugins sites and download addons which suit your needs.

Adding plugin

1. Unpack needed plugin into any directory (plugins folder in Comparer's dir is recommended for portability),
2. Launch Comparer and click on Options,
3. Go to Plugins (WDX) tab and click on + button,
4. Choose WDX plugin window will be shown,
5. browse for needed plugin and click on Open button
6. Specify files extensions to be supported in Extensions field,
7. you can add more plugins or click on OK button to save changes and refresh files view.

You can also drag your WDX files into plugins list in Plugins (WDX) tab or into Plugin field (instead of browsing by a hand).

[Watch movie](#)

Please remember to always have extensions defined.

Plugins with empty extensions field will not be used while comparing.

. will allow to use plugin with any file.

Removing plugin

1. Launch Comparer and click on Options,
2. Go to Plugins (WDX) tab and select unwanted plugin,
3. click on - button,
4. Click on Apply to save changes and OK to close Options window,
5. Close application and delete plugin file from its location,

Supported plugins

You can find all working plugins in the table below.

Please remember that not all WDX plugins are supported now. Some of them might not work so I will be glad if someone will sort this out. I've tested almost all plugins with 0.0.2.0 version but two months passed and a lot of changes has been done since then so it is needed once again to check them all.

Content (WDX) plugins support in Comparer	Plugin	Extensions	Field
Age	*.*	Changed, Created, Accessed,	
anytag.wdx	*.AAC *.APE *.FLAC *.MP3 *.MP4 *.M4A *.M4B *.MPC *.MPEG *.OGG *.OGV *.OGX *.SPEAK

XPIInfo	*.xpi	id, Name, Version, Description, Creator, Contributor(s), Develop

Notes

Some plugins might require additional files to be placed in Comparer's directory (ex. RAR plugins need unrar.dll file). For more info, take a look on plugins' readme files.
